

# The Aurora Difference

## Strata Technology

Every IWP Aurora door begins as two detailed fiberglass skins, which are created in molds made from our IWP solid wood doors. These skins are composed of multiple layers of resins, tinted resins, base colors and reinforcing materials for greater structural strength. Next, the skins are adhered to engineered wood frames with our exclusive core materials and bonding agents that permanently lock the skin to the frame. The skins are not only durable, but also authentic in appearance.

## The Core

In the fiberglass door industry, our PolyMicro Foam Core technology is a first. It not only gives each door a dense, solid feeling, but it also prevents the skin from delaminating (due to the unique adhesion properties of the core material). The core is permanently bonded to the skins and frame so it becomes an integral part of the structure, which keeps the doors from warping.

## Prefinishing

Only IWP Aurora doors offer the Permalane prefinishing system. During this comprehensive process, layers of specially formulated grain filler and UV-protective stain coats are applied. These stain coats are encapsulated in the final protective top coat, which is created to withstand extreme environments. Our skilled artisans control airflow, temperature and humidity throughout the entire process for an exceptional finish that will protect and enhance the beauty of our doors.

# Create A Grand Entrance

Classic panel design

Craftsman panel design

Same construction as classic panel

1. Permalane Prefinish
2. Matching Hardwood Edge Band
3. Laminated Veneer Lumber Stile
4. Raised Moulding
5. Raised Panel
6. PolyMicro Foam Core
7. Non-profiled sticking
8. Flat panel

To make a truly grand entrance, visit STATEMENTS and a design consultant will assist you in selecting the perfect door for your new home.
